### **MyOSPRI for sheep movements**

Sheep farmers can support mob-level tracing by signing up and using MyOSPRI to send both farm-to-farm and farm-to-meat processor electronic Animal Status Declarations (eASDs). Paper ASDs will still need to be used for saleyards.

Not only will you benefit from an easy to use electronic system, using MyOSPRI will also allow you to register your livestock locations. Knowing where animals are will help in the event of a disease outbreak.

## MyOSPRI for cattle and deer

MyOSPRI is OSPRI's new online customer portal that will enable farmers to access OSPRI's integrated animal disease and traceability system. It has replaced the eASD system and will, in time, bring together NAIT and disease management information into one system, so farmers can view disease information and manage livestock movements easily online, and in one place.

For now, farmers with cattle and deer can use MyOSPRI to create electronic ASD's and Declarations to Livestock Transporters (DLTs).

Having accurate, reliable data relating to where animals are, including farm locations and pick up addresses, will improve our ability to launch an effective response to a disease outbreak.
